

**BE Mastery**

Executive Polish — for the workshop and the site

app.lomonec.com

THE FIVE MINUTES BEFORE THE TOOLBOX TALK

Say it in the app first.

Then say it on site.

You already know what you have to report at the morning briefing. Say it into the app, and it comes back the way a supervisor would say it — the problem named, the stop-work said out loud — then reads it to you until you can say it clean under a helmet.

WHAT YOU WERE GOING TO SAY

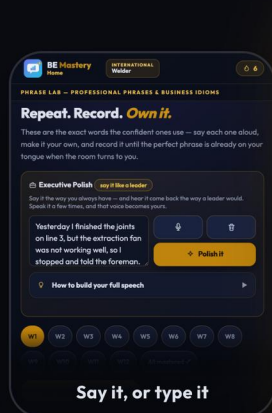

"Yesterday I finished the joints on line 3, but the extraction fan was not working well, so I stopped and told the foreman. Today I will do the root pass on the new spool, and tomorrow I will grind and check the welds."

Nothing is wrong with it. It just doesn't sound like the welder they trust with the next job.

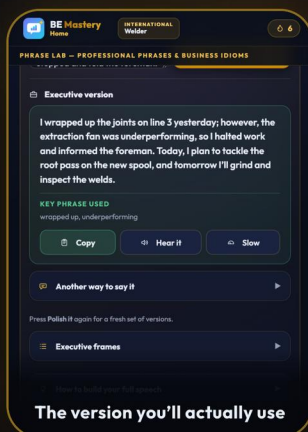

WHAT YOU SAID INSTEAD

"I wrapped up the joints on line 3 yesterday; however, the extraction fan was underperforming, so I **halted work and informed the foreman**. Today, I plan to tackle the root pass on the new spool, and tomorrow I'll grind and inspect the welds."

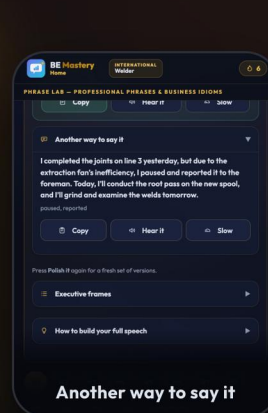

YOU KEEP wrapped up underperforming

Say it, or type it

The version you'll actually use

Another way to say it

1

Say your report

In the van or the changing room, speak the update you are about to give. **Twenty seconds.**

2

Polish it

Two site-ready versions come back, each naming the phrase that made it stronger.

3

Hear it, repeat it

Play it, then slow. Say it back **until it comes out clean through a helmet.**

4

Say it at the talk

Use that version in front of the crew. **Next shift, the words are already yours.**

Executive Polish needs internet — the rest of the app works offline on site. The before and after above are a real result from the app, not poster copy.

SCAN TO START

Polish tomorrow's briefing

app.lomonec.com

Scan the code, choose **Welding**, then open **Phrase Lab**. Nothing to install — it opens in your browser.
